📁 Portfolio

SUMMARY

An ambitious Computer Science Engineering graduate with a strong foundation in core computer science principles and a passion for technology and innovation. Eager to continuously expand my technical expertise and launch a career in the technology sector. With a focused interest in software development, artificial intelligence, and data science, I am dedicated to applying my academic training and practical experience to solve real-world challenges and deliver meaningful value to the industry.

EDUCATION

Chandigarh University , Mohali, Punjab <i>B.E. - Computer Science Engineering - CGPA-7.15</i>	June 2025
G.N. National Public School , Gorakhpur, Uttar Pradesh <i>Intermediate - 92.60%</i>	July 2021
St. Anthony's Convent School , Gorakhpur, Uttar Pradesh <i>High School - 91.33%</i>	May 2019

PROJECTS

Replica Churn Engine Github	2026
- Developed a predictive analytical engine utilizing Python and machine learning paradigms to model and identify user churn patterns. - Designed modular data processing pipelines to analyze behavioral metrics, extract actionable insights, and optimize retention strategies. - Leveraged advanced data structuring techniques to handle datasets efficiently and output accurate predictive visualizations.	
PortVision Github	2026
- Engineered a comprehensive port scanning and network reconnaissance tool tailored for vulnerability assessment and penetration testing (VAPT) workflows. - Implemented robust service enumeration capabilities to identify active endpoints, open ports, and potential attack vectors. - Focused on adherence to standard network security principles to assist in identifying and mitigating system vulnerabilities.	
Face Hit Github	December 2023 - March 2024
- Developed an interactive web-based game integrating real-time facial recognition capabilities via machine learning APIs. - Engineered the front-end architecture using HTML, CSS, and JavaScript to track the user's facial movements as dynamic in-game pointers. - Implemented local storage solutions to persistently track and optimize high-score data management.	
Keylogger Github	June 2023 - September 2023
- Programmed a foundational Python-based keylogging script using the <code>pynput</code> library to monitor and record keystroke events. - Integrated automated chronological logging utilizing the <code>datetime</code> module to capture exact input timestamps. - Configured automated SMTP functionality to securely format and transmit the generated log files via email for remote monitoring.	

SKILLS

- **Programming Languages:** Python, Java, SQL.
- **Core CS Fundamentals:** Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Database Management Systems (DBMS), Computer Networks.
- **Cybersecurity & Networking:** Network Security, Vulnerability Assessment (VAPT), Port Scanning, OWASP Basics.
- **Tools & Technologies:** Git/GitHub, React Native, Machine Learning (Basics), Docker (Familiarity).
- **Databases:** MySQL, MongoDB.

CERTIFICATIONS

- Java Programming (Coursera)
- Programming in Python (Coursera)
- Data Structures (Coursera)
- Introduction to NoSQL Databases (Coursera)
- Networking and Web Technology (Infosys Springboard)
